

The emergent behavior of insects similar to the collective intelligence of an LLC

Group psychology in its infancy Le Bon,

"the most striking peculiarity presented by a psychological group is the following. Whoever be the individuals that compose it, however like or unlike be their mode of life, their occupations, their character, or their intelligence, the fact that they have been transformed into a group puts them in possession of a sort of collective mind (headless) which makes them feel, think, and act in a manner quite different from that in which each individual of them would feel, think and act were he in a state of isolation"

HEADLESSNESS is SWARM is KETU

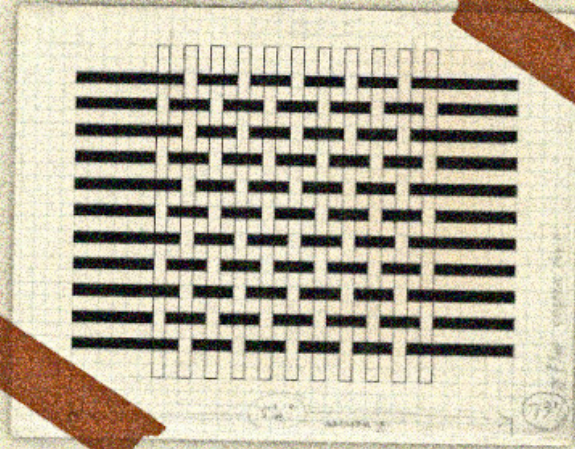

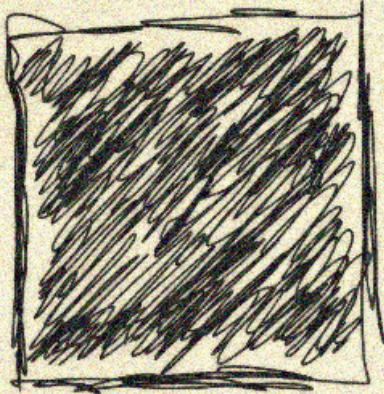

Group-think plays a role in the synthesis of the individual. But what of the individuation process?

Assimilation versus Individuation

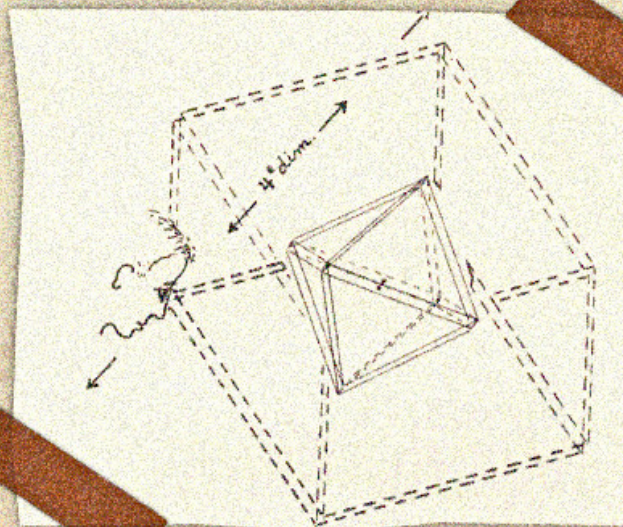

The BB + CC are always working to be disentangled, but there is a moment of union. Once you've experienced it, a new dimension for what is possible in the Querent's life emerges. Support VS domination. The Enchantment + The Entanglement

The corporation - through it's group + swarm ego - must facilitate the Assimilation process

The organization can commit tasks that the individual is incapable of understanding. But what does participation in this swarm do to the individual? Swarm Interface and its shockingly accurate predictive qualities. Circling back to use these predictive mechanisms regarding the individual.
